1. 25° 5/8" Trapezoid Carbide Insert
2. Integrated AR500 Steel Cover Blade
3. Carbide Wear Indicators
4. Moldboard Damage Wear Indicators
5. 3 – 4 ft Blade Segments
6. Interlocking Tabs

CARBIDE INSERTS
Trapezoid carbide insert with 25° bottom edge

Pegasus® XL Carbide Expandable Blade

Ultimate protection for WIDE-OUT XL expandable plows

Pegasus® XL is a professional-grade blade system engineered specifically for contractors with Western® WIDE-OUT™ XL snowplows who need maximum durability and performance. This advanced system combines our proven Razor® carbide cutting edge technology with Xtendor® Universal Plow Guards, creating the longest-lasting expandable plow blade system available for large-scale snow removal operations.

IMPORTANT!
This system requires the use of the OEM steel wing edges. The Xtendor® Universal Plow Guards must be installed over the wing edge. This is performed by either drilling holes into the wing edge and bolting the guard in place or welding the guard to the wing edge. When reattaching the wing edge, 3 of the included ½" washers must be installed behind the wing mounting bolts to space the wing off the moldboard.

Built for Ultimate Performance:

- **Razor® Carbide Insert Blade** - All-In-One carbide & cover blade with 5/8" carbide inserts & AR500 cover blade
- **Premium Carbide Inserts** - Professionally brazed tungsten carbide inserts provide exceptional wear resistance
- **Xtendor® Universal Plow Guards** - Protect wings from uneven and premature wear for consistent performance
- **High-Strength Hardware** - Grade 8 bolts and Stover lock nuts resist loosening during operation
