WinterFLEX® Rubber Cutting Edge System

Why Choose the Complete System

- **Extended Life** - Two layers of high-performance synthetic cloth provide tensile strength that reduces rips and tears
- **Curb Defense** - Universal CurbRunner® Guards protect from curb impact
- **Easy Installation** - Unique backer blades feature pegs that allow blades to be hung in place before bolting

WinterEquipment.com

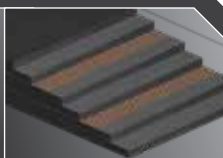

Choose center punched holes, slotted holes or unpunched to fit your setup.

- 1 1.5" Thick Three-ply Construction
- 2 Fabric Reinforcement for Added Rigidity
- 3 4', 5', and 6' Segments Available for Safe & Easy Installation
- 4 Slotted or Center Punched Holes to Allow Flipping

The rubber blade is built with alternating reinforcement layers to add rigidity and durability that reduces rips, tears, and over flexing.

WinterFLEX® Rubber Blade

Premium rubber blade for surface protection

WinterFLEX® is a professional-grade rubber blade system engineered for municipalities and contractors who need maximum durability on specialty surfaces where metal blades could cause damage. This innovative three-ply, fabric-reinforced design combines styrene-butadiene rubber with two layers of high-performance synthetic cloth, creating a blade that delivers superior tear resistance while protecting surfaces, shoulders, and specialty roads.

"We just went through the hardest snows in several years. The Winter Flex systems we've been using for several years performed great. Over 500 miles of plowing on one edge without having to flip it or replace it!!!!!"

Rick Ostendorf, Sharonville, Ohio

Built for Surface Protection:

- › **Three-Ply Construction** - Fabric reinforcement adds strength, increases rigidity, and reduces tears
- › **Center-Punched Design** - Allows blades to be flipped for twice the wear life
- › **Sectional Design** - Lighter, easier, and safer to install than full-length rubber blades
