

Joma by Winter® System

Data Sheet

WINTER
The Snowplow Wear Parts Experts

Carbide | Steel | Rubber

BUILT
DOT
TOUGH

Carbide Insert Moldboard Adapter – Allows for best articulation and JOMA blade performance, protects the moldboard from damage and can be used as a cutting edge in the event JOMA cannot.

Articulation tabs – welded to the adapter blade allows JOMA articulation without overextending.

JOMA – the pioneer of articulating blade technology

Tungsten carbide sections within the rubber blade articulate, conforming to uneven road surfaces

Best Used For

ROADS

Highways, concrete, asphalt

SPEED

High

PLOW TYPE

Front reversible, one-way, wing, and tow plows

ANGLE OF ATTACK

65°–90°

Joma by Winter Equipment is the premium choice for high-speed plowing that also protects road markers and expansion joints with its articulating blade. In addition, its design provides superior performance, while reducing noise and the transfer of vibration the cab, reducing driver fatigue.

JOMA ADAPTER BOLT KIT INCLUDES

	(18) 5/8"-11" x 3" Grade 8 Plow Bolt
	(18) 5/8"-11" Stover Lock Nut
	(18) 5/8" Conical Washer

REPLACEMENT BOLT KIT INCLUDES

	(4) 5/8"-11" x 4" Grade 8 Plow Bolt
	(8) 5/8"-11" x 4" Grade 8 Carriage Bolt
	(12) 5/8"-11" Stover Lock Nut
	(12) 5/8" Conical Washer

This is Winter Equipment

- We're an American snow plow wear parts manufacturer located in Cleveland, Ohio supplying high-quality equipment for more than 30 years. Our wear parts are used in nearly every state in North America.
- We've racked up more than 25 U.S. patents for our proprietary materials, unique manufacturing processes and wear part designs to give you the best equipment possible.
- We are committed to making 'The Right Tool for the Job' for any road-clearing challenge – we are obsessed with the value, innovation, and performance of our products.

We're have the only Satisfaction Guarantee in the snowplow wear parts industry. If your Winter Equipment wear parts fail to meet your expectations for any reason, we will work with you until you are completely satisfied.

Pioneering Common Sense

We were the first wear parts supplier to develop what's known as a complete cutting edge system more than a decade ago, which means you receive a self-contained kit including the cutting edges, the plow guards, and all the hardware you need delivered in one crate. One part number makes it easy to order; one complete system means all the pieces are included, no more hassles with ordering separate pieces and parts.

Questions?

For help on what's the best blade option for your road conditions, or how changing your cutting edges can help reduce your salt & chemical usage, call our knowledgeable wear parts experts: 800.294.6837 or email us: bwakeland@winterequipment.com

BOB WAKELAND

Impervium™ carbide is cutting-edge tech in durability and long blade life

You might think all there is to carbide is that it makes cutting edges tough. While that's true, there's a little more to that story you might find interesting. Carbide is our specialty, and we want you to know how we use it to make longer-lasting cutting edges for you.

We use carbide in our cutting-edge design in two different ways; first, we developed a unique multi-layered welding process to create wear-resistant pockets in the edge, making the material as durable as possible without becoming brittle and vulnerable to fracturing caused by surface impacts. The result is a material we proudly call Impervium™ carbide, a patented technology available only in wear parts from Winter Equipment.

The second application of carbide involves the use of two kinds of carbide inserts: wear-resistant slugs of carbide that are braised into a groove in the cutting edge. These inserts have either a trapezoid profile for blades with a fixed attack angle, or a bullnose profile for blades with an adjustable attack angle. For even more durability, we produce a heavy-duty carbide insert made with our Impervium carbide called HammerHead™, which is formulated for the right balance of hardness and fracture resistance. We make our inserts in separate 1" sections to stop a fracture before it spreads across the entire edge of the blade. That's why even if a Winter carbide edge cracks, only a very small section of the edge is compromised, but the rest of the blade remains usable.

So carbide is one way we add industry-leading durability and performance to our cutting edges, beginning with the composition of the steel itself, and then the purpose-driven profile of the insert shape. We apply these principles to all our wear parts including carbide, steel and rubber cutting edges, plow guards, wear shoes, hardware and accessories.
