4. Carbide Wear Indicators
5. Moldboard Damage Wear Indicators
6. 3 – 4 ft Blade Segments
7. Interlocking Tabs

WINTER CARBIDE™
Provides even wear and extended life

Razor® XL with Winter Carbide™ Blade

Premium wear life for high-speed highway clearing

Razor® XL with Winter Carbide™ is the high-performance cutting edge blade built for state DOTs and counties who demand maximum uptime on highways and high-speed routes. This premium blade replaces traditional tungsten carbide inserts with our exclusive Winter Carbide™ fill throughout the entire cutting edge. You get carbide-level performance with superior wear life and greater impact resistance — without the shatter risk that comes with standard inserts. The integrated AR500 steel cover protects the cutting edge from impacts and features wear indicators so you can visually see how much life is left in your edge. Welded-on Winter Carbide™-filled wear shoes eliminate the need for separate moldboard or frame shoes.

Built for Maximum Performance:

- **American-Made Winter Carbide™** - Proprietary carbide that won't shatter on impact like tungsten inserts
- **Integrated Wear Shoes** - Cast steel filled with Winter Carbide™ welded to the blade back
- **Integrated AR500 Steel Cover** - Perfectly positioned to prevent carbide impact damage
- **Wear Indicators** - Show when carbide is used up and prevent moldboard damage
